

Sales Analysis Dashboard

Business Intelligence & Insights

Abdallah Mohamed Draz

Project Overview

Business Challenge

Organizations need clear visibility into sales performance to identify high-performing products, top regions, and growth opportunities. Without data-driven insights, companies struggle to make informed strategic decisions.

Dashboard Purpose

This interactive dashboard transforms raw sales data into actionable business intelligence. It provides executives with real-time visibility into performance metrics, trends, and opportunities across regions, categories, and customer segments.

Dataset & Data Preparation

Dataset Structure

10 key fields including Order ID, Customer ID, Sales, Category, Sub-Category, Region, Segment, Ship Mode, and Date

Data Tools

Power BI for visualization, Power Query for data transformation, and DAX for calculated measures and business logic

Data Preparation

Missing value handling, data cleaning, calculated measures creation, and time-based transformations for Year, Month, and Day analysis

Key Performance Indicators

1,250

Total Orders

Complete order volume
analyzed across all
regions and time periods

\$456K

Total Sales

Aggregate revenue
across all product
categories and customer
segments

18%

Growth Rate

Year-over-year sales
increase demonstrating
market expansion

\$365

Average Sale

Mean transaction value
providing insight into
customer purchasing
behavior

Executive Overview

Regional Performance

Sales distribution across geographic regions reveals market strength and expansion opportunities. West region leads with highest revenue contribution.

Customer Segments

Corporate, Consumer, and Home Office segments show distinct purchasing patterns. Corporate accounts drive highest volume.

Yearly Trends

Consistent year-over-year growth demonstrates market expansion and increasing customer adoption across all segments.

Time Series Analysis

1

Yearly Growth

Annual sales trajectory shows consistent upward trend with seasonal peaks

2

Quarterly Patterns

Q4 consistently strongest quarter driven by holiday season demand

3

Monthly Trends

Monthly granularity reveals buying cycles and promotional impact

4

Daily Analysis

Weekday vs weekend patterns inform staffing and inventory decisions

Product Performance Analysis

Top Performers

- Technology category leads all product lines
- Phones and Chairs drive highest volume
- Furniture shows strongest growth rate

Low Performers

- Tables category underperforming significantly
- Supplies segment needs optimization
- Weak categories require strategic intervention

Customer & Shipping Insights

Customer Segments

Corporate customers drive 45% of total sales,
Consumer segment at 35%, Home Office at 20%.
Corporate accounts show highest average order
value.

Shipping Performance

Standard Class shipping accounts for 60% of
orders with lowest cost. First Class drives
premium segment with higher margin. Priority
Mail balances speed and cost.

Key Insights & Recommendations

Focus Strategy

Prioritize high-performing Technology and Furniture categories while addressing weak performers

Optimize Shipping

Benchmark shipping costs across modes and negotiate carrier rates for priority segments

Data-Driven Culture

Empower decision-making with real-time dashboard access across leadership and operational teams

Conclusion

This sales performance dashboard transforms raw data into strategic advantage. By identifying high-performing products, top regions, and customer segments, organizations can make confident, data-driven decisions that drive revenue growth and operational efficiency.

Thank you
